TIB | TECHNISCHE INFORMATIONSBIBLIOTHEK

Hintergrund:
Paradigmenwechsel in den Wissenschaften

- Vor eintausend Jahren
  War die Wissenschaft **empirisch:**
  beschrieb Naturphänomene

- In den letzten einhundert Jahren entstand
  ein **Theoretischer** Zweig:
  aufbauend auf Modellen,
  Generalisierungen

$$\left(\frac{\dot{a}}{a}\right)^2 = \frac{4\pi G\rho}{3} - K\frac{c^2}{a^2}$$

- In den letzten Dekaden ein
  Informatischer Zweig:
  Simulation komplexer Phänomene

- Heute ist Wissenschaft
  Datenbasiert (eScience):
  Vereinigung von Theorie, Experiment und
  Simulation

Title:	SAFOD Main Hole downhole logging data phase 1.2 1894-2123m, year: 2004
Author(s):	SAFOD,
Published in:	2008;
Publisher:	GeoForschungsZentrum Potsdam(GFZ) (Potsdam, Germany)
Document type:	Research Data
Language:	English
DOI:	10.1594/GFZ.SDDB.1121

Abstract

SAFOD is motivated by the need to answer fundamental questions about the physical and chemical processes controlling faulting and earthquake generation within a major plate-bounding fault. SAFOD will drill and instrument an inclined borehole across the San Andreas Fault Zone to a depth of 3.2 km, targeting a repeating microearthquake source. The drill site is located west of the vertical San Andreas Fault on a segment of the fault that moves through a combination of aseismic creep and repeating microearthquakes. It lies at the extreme northern end of the rupture zone of the 1966, Magnitude 6 Parkfield earthquake, the most recent in a series of events that have ruptured the fault five times since 1857. This data set contains open hole geophysical wireline logging data from 1894-2123m (measured depth relative to Kelly Bushing, which is 9,45m above ground level).
This dataset is cited by doi: 10.1029/2006GC001388.

Title: SAFOD Main Hole downhole logging data phase 2 (2005), 2975-3387m

Abstract: SAFOD is motivated by the need to answer fundamental questions about the physical and
              chemical processes controlling faulting and earthquake generation within a major plate-bounding
              fault. SAFOD will drill and instrument an inclined borehole across the San Andreas Fault Zone to
              a depth of 3.2 km, targeting a repeating microearthquake source. The drill site is located west of
              the vertical San Andreas Fault on a segment of the fault that moves through a combination of
              aseismic creep and repeating microearthquakes. It lies at the extreme northern end of the rupture
              zone of the 1966, Magnitude 6 Parkfield earthquake, the most recent in a series of events that
              have ruptured the fault five times since 1857. The Parkfield region is the most comprehensively
              instrumented section of a fault anywhere in the world, and has been the focus of intensive study
              for the past two decades. This data set contains open hole geophysical wireline logging data from
              2975-3387m (rel. to rig floor, 9,45m abv gnd)

Title:	Geological map of Potter Peninsula (King George Island, South Shetland Islands, Antarctic Peninsula)
Author(s):	Kraus, Stefan; del Valle, Rodolfo
Published in:	2008;
Publisher:	PANGAEA - Publishing Network for Geoscientific & Environmental Data (Bremen/Bremerhaven)
Document type:	Research Data
Language:	English
DOI:	10.1594/PANGAEA.667386

Abstract

We present here a new geological map of Potter Peninsula (King George Island, South Shetland Islands). Like on adjacent Barton Peninsula, the morphology on Potter Peninsula is predominantly characterized by a glacial landscape with abrasion platforms offshore, in parts steep cliffs along the coast, and a rather smooth, hilly countryside in the interior. Potter Peninsula forms part of the downthrown Warszawa Block. The volcanic sequence cropping out here belongs to the King George Island Supergroup, with an observed local minimum thickness of approx. 90 m (Kraus 2005). The most prominent morphological feature is Three Brothers Hill (196 m), a well known andesitic plug showing conspicuous columnar jointing. It marks the final stage of activity of a Paleogene volcano, whose eruption products (lava flows and pyroclastic rocks), together with hypabyssal intrusions related to the volcanism, make up most of the lithology observed on Potter Peninsula (Kraus 2005).

The Three Brothers Hill volcanic complex is eroded down to its deepest levels. Thus, the stratigraphically deepest units from the initial phase of volcanic activity are cropping out in some parts (Kraus & del Valle, in Wienke et al. 2008). The lithology on Potter Peninsula comprises lava flows (~50%), pyroclastic rocks (ash-fallout, pyroclastic flow deposits, volcanic breccia and agglomerates, ~30%) and hypabyssal intrusions (dykes, sills and small subvolcanic intrusive bodies, ~20%). 40Ar/39Ar datings carried out on magmatic dykes from Potter Peninsula indicate a short, but intense intrusive event during the Lutetian (Kraus et al. 2007).

the planktic foraminiferal flux in the vicinity of the Azores Current. *Deep-Sea Research I*, **56(1)**, 107-124, doi:10.1016/j.dsr.2008.08.009

Abstract: Planktic foraminiferal (PF) flux and faunal composition from three sediment trap time series of 2002-2004 in the northeastern Atlantic show pronounced year-to-year variation
despite similar sea surface temperature (SST). The averaged fauna of the in 2002/2003 is dominated by the species Globigerinita glutinata, whereas in 2003/2004 the averag
fauna is dominated by Globigerinoides ruber. We show that PF species respond primarily to productivity, triggered by the seasonal dynamics of vertical stratification of the up
water column. Multivariate statistical analysis reveals three distinct species groups, linked to bulk particle flux, to chlorophyll concentrations and to summer/fall oligotrophy wi
SST and stratification. We speculate that the distinct nutrition strategies of strictly asymbiontic, facultatively symbiontic, and symbiontic species may play a key role in explain
their abundances and temporal succession. Advection of water masses within the Azores Current and species expatriation result in a highly diverse PF assemblage. The Az
Frontal Zone may have influenced the trap site in 2002, indicated by subsurface water cooling, by highest PF flux and high flux of the deep-dwelling species Globorotalia scitu
Similarity analyses with core top samples from the global ocean including 746 sites from the Atlantic suggest that the trap faunas have only poor analogs in the surface sedim
These differences have to be taken into account when estimating past oceanic properties from sediment PF data in the eastern subtropical North Atlantic.

- Das DOI System bietet persistente Links als stabile Referenzen zu Wissenschaftlichen Inhalten
- Seit 2005 war die TIB eine DOI Registrierungsagentur

- Seit 2010 gibt es **DataCite**

DataCite

- Globales Konsortium getragen von lokalen Einrichtungen
- Fokussiert auf die Verbesserung des Zugangs zu und der Zitierung von Daten und anderen nicht-textuellen Inhalten.
- In Kooperation mit Datenzentren und anderen Einrichtungen, die Daten vorhalten.
- Entwicklung von Standards, Workflows und Best-practice
- Initial, aber nicht exklusiv auf dem DOI System basierend.
- Gegründet am 1. Dezember 2009 in London

Mitglieder

- Technische Informationsbibliothek (TIB)
- Canada Institute for Scientific and Technical Information (CISTI),
- California Digital Library, USA
- Purdue University, USA
- Bibliothek der TU Delft,
  Die Niederlande
- Technical Information
  Center of Denmark
- The British Library
- ZB Med, Deutschland
- Gesis, Deutschland
- Bibliothek der ETH Zürich
- L'Institut de l'Information Scientifique
  et Technique (INIST), Frankreich
- Australian National Data Service (ANDS)

Assoziierte Mitglieder:
- Digital Curation Center (UK)
- Microsoft Research

TIB | TECHNISCHE
INFORMATIONSBIBLIOTHEK
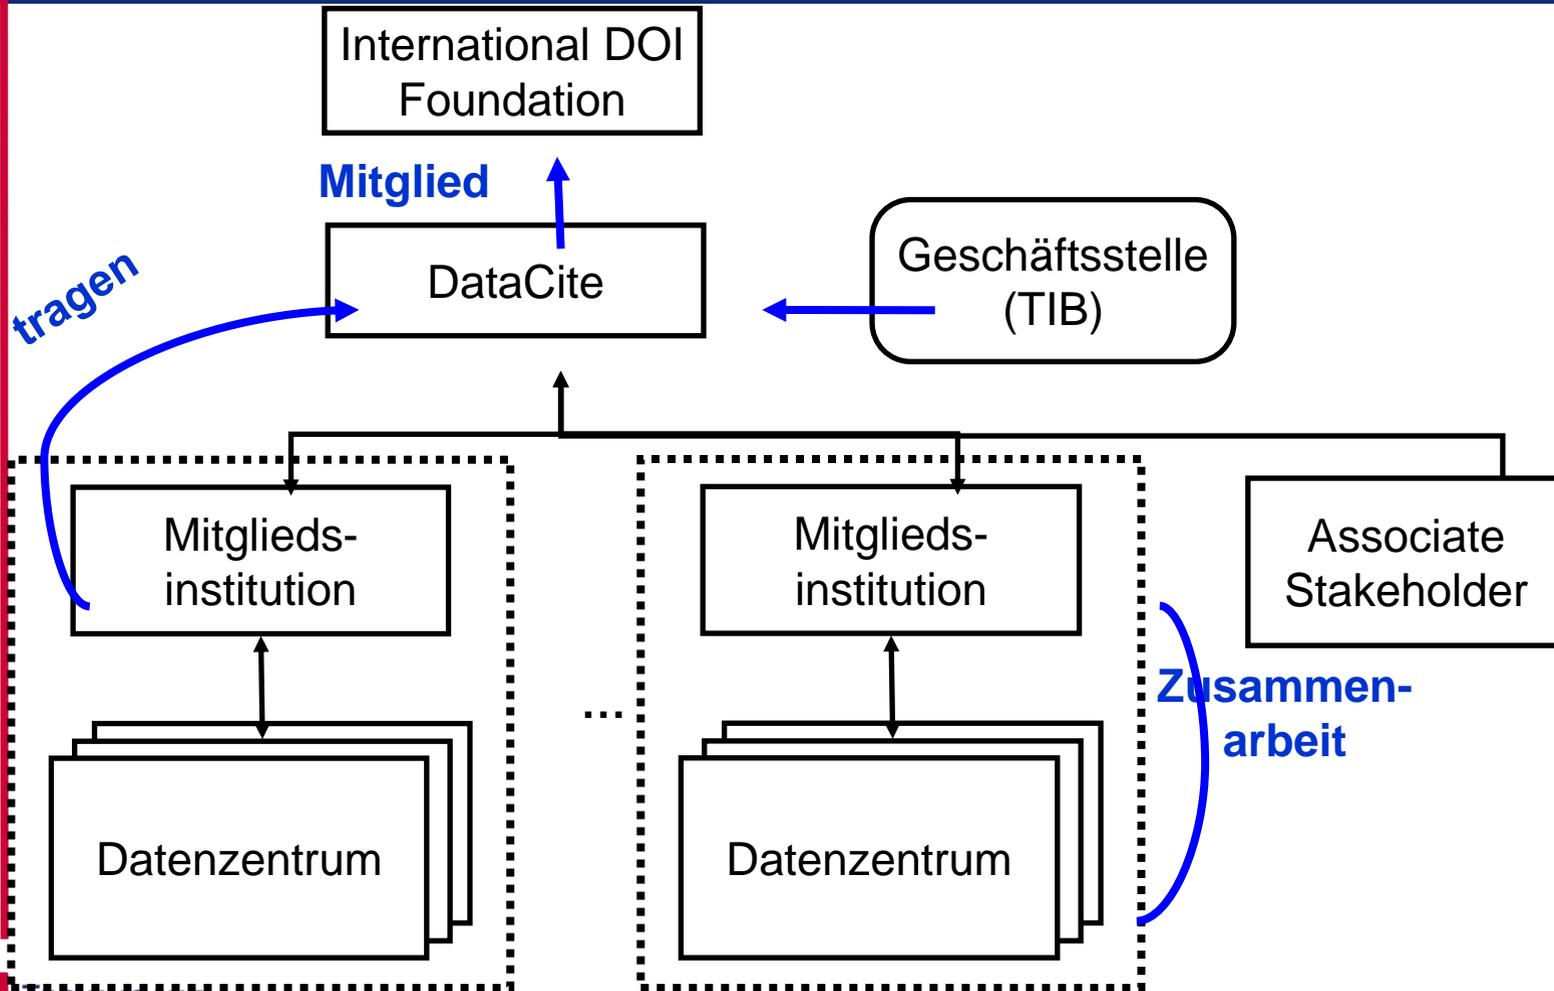

Zusammenfassung

- Bibliothekskataloge sollen Portale sein in einem Netz aus vertrauenswürdigen Anbietern von Wissenschaftlichen Inhalten.

- Gemäß dem Paradigmenwechsel in der Wissenschaft gehören dazu auch Daten und andere nicht-textuelle Inhalte.

- Lokale Infrastrukturen müssen geschaffen werden, gerade in der Ebene der Datenzentren.

- Globale Kooperationen von lokalen Partnern sind wichtig (Think global, act local)
