Research infrastructure for problem-based research: Aligning research, policy and practice (View details)

Fedora-based repository system which aggregates, stores, articulates relationships between, and disseminates resources associated with Australian social science research in HIV and related diseases is demonstrated. The model has been developed to bridge the gap between eResearch infrastructure capabilities and established collaborative research practice in various disciplinary fields. Underpinning the design is the proposition that eResearch facilities will be optimally used if they fit seamlessly with existing workflows and practices of researchers, and that alignment of research with policy and practice is best achieved if collaborators are able to access and share resources in a timely and efficient manner. The open Fedora-based repository contains metadata and digital objects for research and policy publications, conference presentations, health promotion campaign resources and media reportage relating to Australian social and policy research in HIV and related diseases. The presentation provides an overview of the content model, including methods for identifying and displaying relationships and for aggregating material in the repository. The implementation outlined in the paper advances significant Australian social and policy research by providing an integrated research facility for the curation, sharing, re-use and exchange of resources required by academic, government and community-based partners throughout the research process.

HRH Knowledge Centre

Welcome to the Human Resources for Health Knowledge Centre, an innovative and practical tool to assist people in locating key resources on HRH, facilitate the exchange of knowledge amongst those with an interest in HRH policy and practice, and a space to discuss and debate key issues in HRH.

The Knowledge Centre is due to go live at the end of December 2009, so please check back then.

In the meantime if you have any questions about the Knowledge Centre please contact Dr. Angela Dawson.

Khaleghian; P, Gupta; M. Public management and the essential public health functions. World Development. 2005;33 :1083- 99.

Language: English

This paper provides an overview of how different approaches to improving public sector management relate to the so-called core or essential public health functions such as disease surveillance, health education, monitoring and evaluation, workforce development, enforcement of public health laws and regulations, public health research, and health policy development. Using the principles of agency theory, the paper summarizes key themes in the public management literature and draws lessons for their application to these core functions, especially in low- and middle-income countries. Social and Policy Research in HIV, Hepatitis C and Related Diseases
This is a gateway to Australian resources related to social and policy research in HIV/AIDS, hepatitis C and related diseases. Resources include research articles, media items, campaign material, reports, guidelines, fact sheets, conference posters, presentations and more.
This project builds upon the NSW Health-funded Consortium Clearinghouse developed at the National Centre in HIV Social Research (NCHSR). The current initiative, a partnership between the UNSW Library and NCHSR, has been supported by the ARROW Project, funded by the Australian Commonwealth Department of Education, Science and Training, under the Research Information Infrastructure Framework for Australian Higher Education.
Featured Resources
The Commonwealth Department of Health and Ageing has recently released 2010-2013 National Strategies for blood borne viruses and sexually transmissible infections.

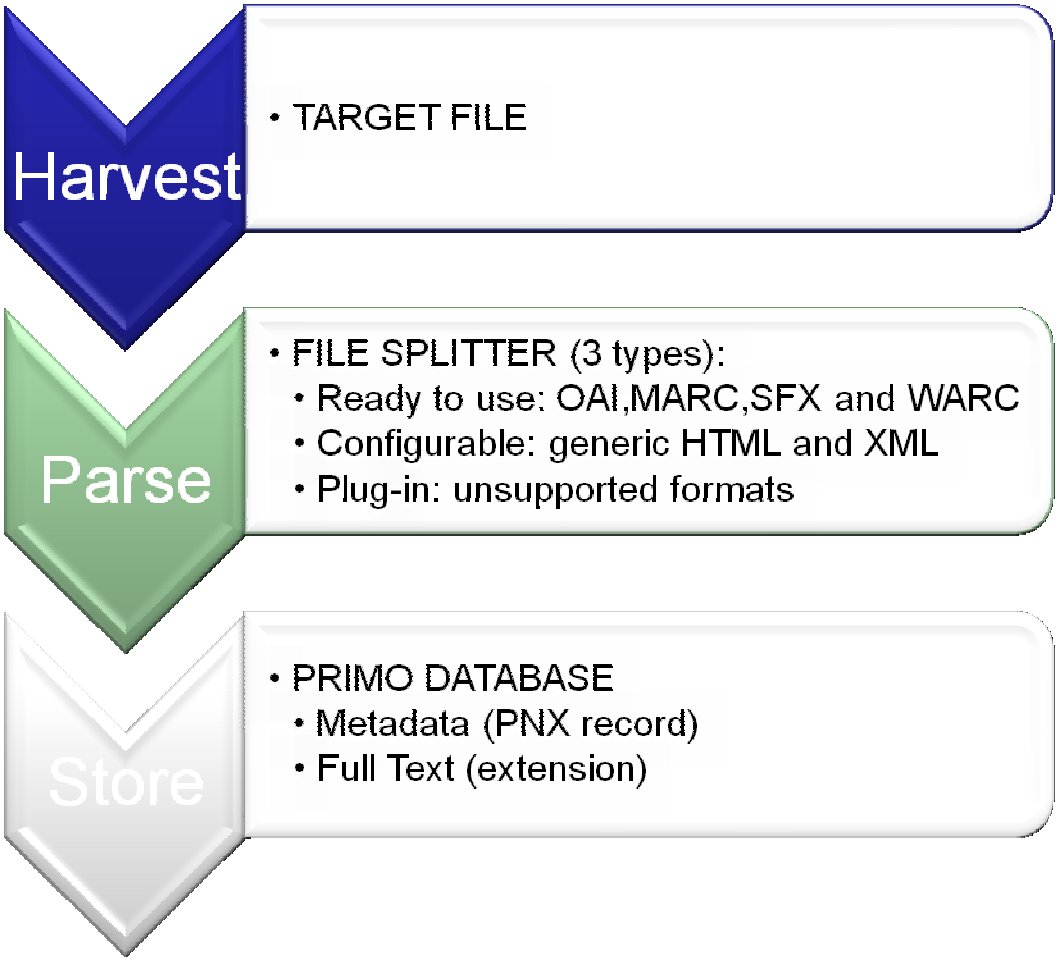
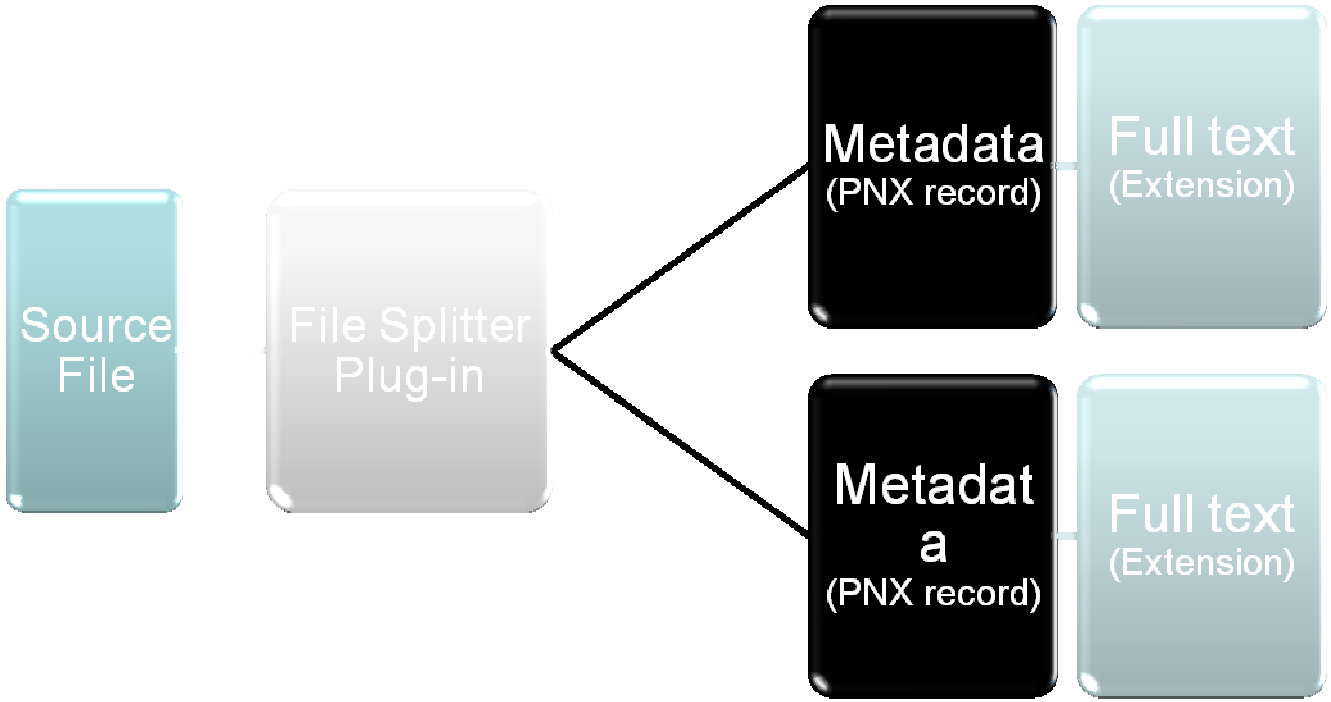
File Splitter



File Splitter (plug-in)



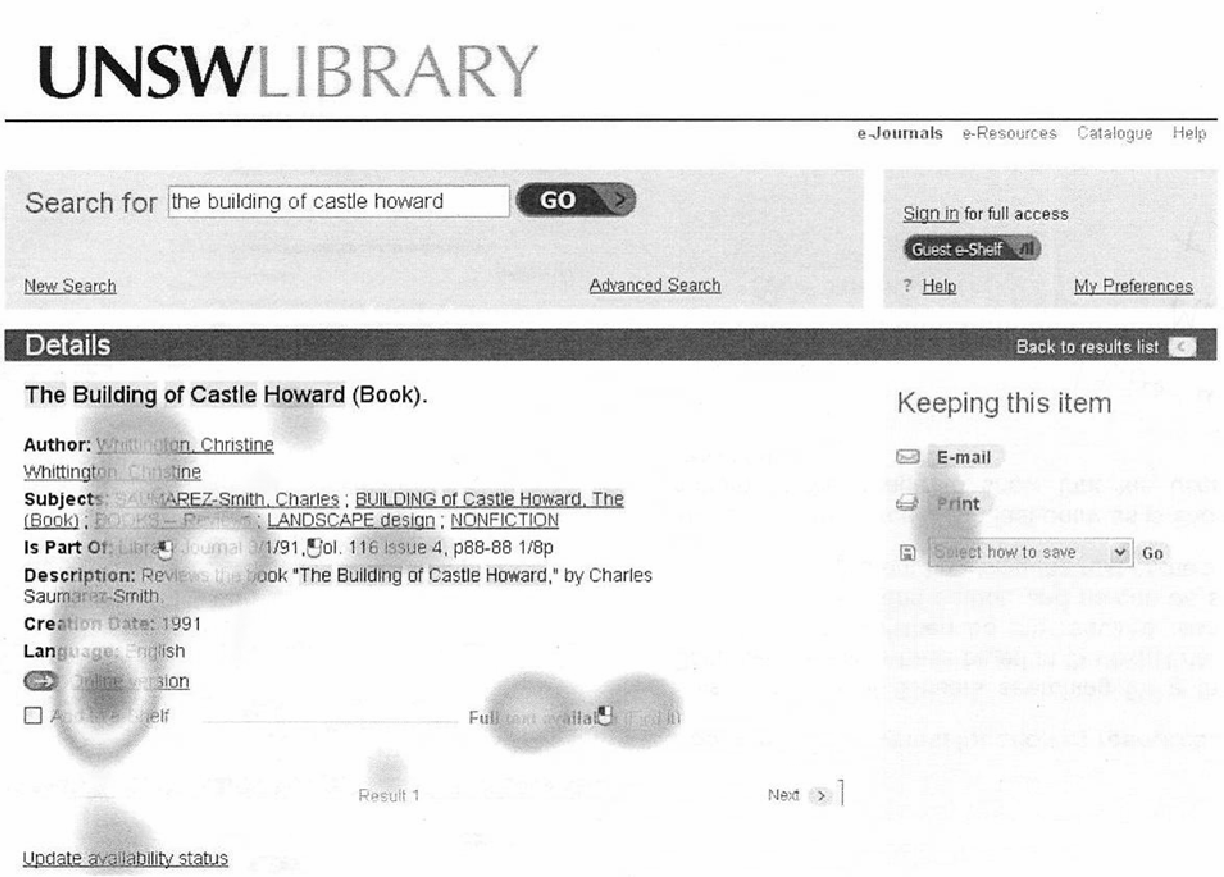
Ongoing challenges

- Global and per view customisations
- Tension between being part of enterprise system and meeting particular requirements of researchers

Next steps

- Governance structures – authentication for contributors, users etc.
  - Beyond LDAP
- Use with mobile technologies
  - Low bandwidth access
- Integration with CRE tools
- Usability testing with researchers

SearchFirst heat map



Advantages for LRS

- Mainstreaming of UNSWorks
- Sustainability – part of enterprise system
- Frees up LRS staff resources to develop and extend repository services

Advantages for researchers

- Institutional stability
  - long term stewardship
  - sustainability beyond funded projects/centres
- Potential for cross institutional interoperability
  - via existing and emerging Library systems and workflows
- Cost benefits

Broader advantages

- Ex Libris product developed with reference to repository requirements
  - library systems support changing opportunities for research information management and scholarly communication
- Agile system capable of evolving along with changes in research practice and infrastructure
