Video and Mass Storage

Dave Tarrant, University of Southampton

Abstract: There are a number of challenges in handling large amounts of data for multimedia content - the sheer size of raw HD video data and the many versions of a video that are created during production and dissemination requires a bespoke infrastructure that is different in nature to the normal browser-based solutions. This session looks at the vidEPrints customisation designed to integrate with an institution's video production environment and handle dissemination via multiple services including YouTube and iTunes U
